Experiment 1 - Write a program using command line argument in java

Echoing Command-Line Arguments:

```java
1   class CommandArgsEcho
2   {
3     public static void main(String args[])
4     {
5          for(String str : args)
6          {
7              System.out.println(str);
8          }
9       }
10  }
```

Output :

```
java CommandArgsEcho Hello World from main
Hello
World
from
main
```

Parsing Numeric Command-Line arguments

```java
1    class CmdArgsParseNum
2    {
3        public static void main(String args[])
4        {
5            int sum = 0;
6            for(int i = 0; i < args.length; i++)
7            {
8                sum += Integer.parseInt(args[i]);
9            }
10           System.out.println("The Sum of all the integers is: " + sum);
11       }
12   }
```

Output :

```
java CmdArgsParseNum 1 2 3 4 5
The Sum of all the integers is: 15
```
